Education

University of Central Florida — Orlando, FL
Bachelor of Science in Computer Science, GPA: 3.9 — *May 2026*

Experience

Software Engineer I — June 2026 – Present
Ubicquia — *Ft. Lauderdale, FL*

- Developed **RabbitMQ** data pipeline in Python to route customer external dives metering data to provide platform support for external assets, handling **100,000** node transactions asynchronously per **4 hours**
- Created Webhook integration system in **Python/RabbitMQ** to integrate our internal work order system with customers external system
- Developed daily sync job in Python for NOC team to perform data analysis on over **3 million** lighting fixtures and **400,000 transformers**, deployed and horziontally scaled with **Kubernetes**

Software Engineer Intern — May 2025 – May 2026
Ubicquia — *Ft. Lauderdale, FL*

- Developed **RabbitMQ** Analytics engine to process S3 images into a **Python** Pillow package for post-processing OCR to identify **150** installation sites
- Designed End-to-End feature to audit installation sites, using **PostgreSQL** and **Laravel APIs**, reduced the number of re-route requests
- Optimized installation flow from initial release, engineered **Laravel** APIs to automate retrieval of device metadata, improved installation time from **60 minutes** to **20 minutes**
- Automated the weather data aggregation for **30,000+** customer nodes utilizing a **RabbitMQ** consumer/producer pipeline in **Python**

Projects

NASA Artemis Rover Simulation | *Java, Blender, TrickHLA, Pitch RTI* — January 2026 – April 2026

- Developed Lunar Rover simulation following the TrickHLA framework to provide visualizations of systems for the Artemis V+ effort
- Created pipeline on an MP2 socket to provide Unreal Engine with compatible data types
- Designed Rover System level interactions following a publish/subscribe network to exchange data on our RTI

StudyBoards | *NextJS, Typescript, React, MongoDB, Docker, Go* — November 2025 – Jaunary 2026

- Created Full Stack application in Typescript and Go that creates bulletin-board style pages for students to post documents
- Leveraged Neo4J to plot boards and their documents as nodes on a graph, enabling users to find similar boards
- Engineered system with RabbitMQ to downstream uploads and their progress to users
- Built deployment pipeline with kubernetes to orchastrate Neo4j, Golang API, MongoDB, and RabbitMQ systems for data integrity and reliability

Radioclub | *NextJS, Typescript, React, PostgreSQL, Docker, Go* — September 2024 – November 2024

- Built CI/CD pipeline with GitHub actions, increased frequency of deployments and automated code coverage
- Enabled users to sync playlists, compare stats, and combine music across platforms, generated 80+ playlists
- Implemented local testing environments with Docker to automate database, sped up API development
- Developed backend in Go and database in PostgreSQL to map and fetch data between users, playlists, and songs

Skills

Languages: Java, Python, C, SQL, JavaScript, HTML/CSS, Typescript, PHP, Go
Frameworks: React, Node.js, Express, NextJS, Laravel, Electron, Springboot
Developer Tools: Git, Docker, Kubernetes, GitHub Actions, PostgreSQL, MongoDB, Playwright, AWS, Linux, Redis
